

State budgetary institution of health care of the Astrakhan region "Regional cancer clinic»

№ 01-25 / 1025 May, 31 2018

EXPERT REPORT

In accordance with the letter of the Ministry of Healthcare of the Astrakhan region, dated March 29, 2018 № 02-08-15-04716 an expert evaluation of the original domestic innovative ointment under the trademark BIOINTEGRA (Declaration of Conformity of the EAEU # RU D-RU.AP02.B.03987 and Certificate of Conformity # ROSS RU.FD83.P02142 for HS Code-3304990000) was conducted to determine the possibility of its' implementation on the territory of Astrakhan region within international project BIOINTEGRA.

The ointment contains the following pharmacologically active substances: amorphous mineral complex of Mg-Zn-GAP with an antimicrobial bacteriostatic impact, that regenerates skin tissue; turpentine salve – a natural substance that improves skin trophic, hyaluronic acid - helps to restore the structure of the connective tissue of the skin. Polyethyleneglycol of two types is used as the basis of the ointment for stabilization of active components.

Thus, BIOINTEGRA ointment is a versatile modern high-technology means, obtained in combination of traditional and innovative advanced scientific results of the modern international healthcare cluster aimed for achieving of effective quality in the field of health-saving technologies, which is confirmed by the international expert community.

The results obtained under evaluation of BIOINTEGRA ointment allow us to recommend its' widespread implementation within the international project BIOINTEGRA in the region with the development of a program for the rehabilitation of cancer patients.
